EXPERIMENT NO. 6: ONLINE CAKE ORDERING SYSTEM (BUY A CAKE)

AIM:

To design and implement an online cake ordering web platform allowing customers to browse cakes by category and flavor, customize cake weight and messages, add items to cart, enter delivery schedules, and track live order fulfillment statuses.

PSEUDOCODE (IN 6 SIMPLE POINTS):

Step 1: Initialize the cake catalog with flavors (Black Forest, Red Velvet, Truffle), occasion tags, and base prices.

Step 2: Display an attractive product showcase with filters for categories, flavor preferences, and price ranges.

Step 3: Enable customers to customize selected cakes by choosing weight (0.5 kg, 1 kg, 2 kg) and entering custom piped messages.

Step 4: Maintain an interactive shopping cart with functionalities to add items, modify quantities, and calculate order totals.

Step 5: Capture recipient delivery address, delivery date, preferred delivery time slot, and simulate payment confirmation.

Step 6: Equip admin with controls to add new cake items, adjust prices, and update logistics order status (Baking, Dispatched, Delivered).

            </div>`;
        cakeCart = [];
        renderCart();
    }
  </script>
</body>
</html>
```

Output:

```html
```

```

## RESULT:

***Thus, the online cake ordering system was successfully designed and tested, implementing flavor selection, customized text inscription, shopping cart calculations, and live delivery status tracking.***
```
