EXPERIMENT NO. 8: MEDCARE HOSPITAL ONLINE APPOINTMENT BOOKING SYSTEM

AIM:

To develop a healthcare portal for MedCare Hospital enabling patients to search doctors by specialty/location, schedule appointment slots, submit online pre-consultation check-in symptoms, and allow hospital admins to manage doctor rosters and patient stats.

PSEUDOCODE (IN 6 SIMPLE POINTS):

Step 1: Initialize medical database with departments (Cardiology, Orthopedics, Pediatrics), doctors, and available consultation hours.

Step 2: Provide search interface allowing patients to filter doctors by medical specialty, experience, and branch location.

Step 3: Display doctor profile cards showing qualification, consultation fee, hospital room, and real-time appointment slots.

Step 4: Allow patient to select preferred consultation time and fill out an online digital check-in form with symptoms and medical history.

Step 5: Generate an electronic appointment pass featuring patient token number, appointment time, and doctor cabin information.

Step 6: Equip hospital admin with controls to add/update doctor rosters, monitor daily patient statistics, and review department ratings.

</body>
</html>
```

Output:

RESULT:

Thus, the MedCare Hospital online appointment booking system was successfully developed and verified, enabling department filtering, slot reservation, digital symptom check-in, and instant token generation.
