EXPERIMENT NO. 13: BLOSSOMGIFTS ONLINE FLORAL & GIFT ORDERING PLATFORM

AIM:

To design the BlossomGifts web application for ordering flowers and custom gift baskets with occasion-based filtering (Birthday, Anniversary, Festive), customizable delivery scheduling, shopping cart calculations, and real-time delivery tracking.

PSEUDOCODE (IN 6 SIMPLE POINTS):

Step 1: Initialize gift catalogue with floral arrangements, chocolates, customized baskets, and prices.

Step 2: Provide occasion-based navigation filters (Birthday, Romance, Congratulations) to display matching gifts.

Step 3: Allow users to select gifts, choose quantity, and add personalized greeting messages to be printed on gift tags.

Step 4: Implement date and time-slot picker for scheduled delivery (Morning, Standard, Midnight surprise).

Step 5: Maintain an interactive cart computing merchandise cost, optional delivery surcharges, and order grand total.

Step 6: Generate order confirmation ID and provide a simulated tracking timeline (Order Packed, Out for Delivery, Delivered).
