# EXPERIMENT NO. 9: TECHSAVVY ONLINE ELECTRONIC GADGETS SHOPPING PLATFORM

## AIM:

To develop the TechSavvy e-commerce web platform for electronic gadgets featuring categorized browsing (Smartphones, Laptops, Accessories), keyword search, interactive cart management, checkout handling, and admin product price/stock controls.

## PSEUDOCODE (IN 6 SIMPLE POINTS):

**Step 1:** Structure the gadget catalog into distinct electronic categories with brand, specifications, price, and stock levels.

**Step 2:** Display an interactive storefront with instant search filtering across product titles and specifications.

**Step 3:** Enable customers to add gadgets to their shopping cart, inspect cart items, and modify quantities dynamically.

**Step 4:** Calculate subtotal, apply promotional discount coupons, add taxes, and present the final payable amount.

**Step 5:** Implement a simulated secure checkout workflow capturing customer shipping address and payment method.

**Step 6:** Provide an admin portal interface allowing authorized administrators to add new gadget models, update prices, and view customer purchase lists.

```

## Output:

## RESULT:

*Thus, the TechSavvy electronic gadgets shopping platform was successfully constructed and verified with product category searches, dynamic shopping cart operations, discount code handling, and order checkout.*
